Sommario

• Create the detailed DDIT solution/service design, based on functional specifications to meet quality and performance requirements and technical constraints
• Responsible for detailed design, development, code review and delivery of system solutions

About the Role

Roles and responsibilities:

- Responsible for detailed design, development and delivery of system solutions and related integrations for a specific business or technology area in alignment defined solution architecture and create the detailed process designs necessary to operate the software/service on a day-to-day basis
- Should be thorough with latest integration technologies and related concepts.
- Take accountability for technical delivery of projects/use cases for a specific business
- area
- Ensure that detailed designs adhere to solution architecture design (i.e. high level conceptual design)
- Ensure designs produced adhere to architectural roadmap, support the development, execution and operations of software/service and are traceable to functional as well as non-functional requirements in functional specification
- Provide comprehensive and authoritative technical guidance and ownership on a wide range of aspects within the area of project execution to influence internal and/or external stakeholders
- Ensure the overall user experience is considered when designing new solutions and services
- Take accountability to ensure adherence with Security and Compliance policies and procedures within Service Delivery scope.
- Individual contributor with responsibility for high to medium sized complexity of projects

Essential Requirements:

Education:

- Bachelor's degree in Computer Science, Computer Engineering or related technical discipline or equivalent experience demonstrated

Experience

- 12+ years of experience with expert understanding and proven track record in analyzing business processes, architecting, designing, developing and integrating complex, cross-divisional end to end technical solutions with large data volumes.
- Should have a background in programming and solution design. Exposure to a wide wide range of

technologies is preferred.

- Experience in integrating or implementing Commercial off-the-shelf products
- Excellent verbal and written communication skills with ability to interact with senior IT and business stakeholders
- Ability to effectively convey complex technical concepts to a non-technical audience.
- Self-starter with ability to work autonomously in a highly matrixed and multi-cultural environment, taking full ownership of deliverables.
- Experience in highly regulated environments, ideally in the Pharma industry, including on Computer System Validation
- Experience working in Agile Scrum teams
